

For Immediate Release

Pacific Wireless Releases Dual Band RooTenna® for the 2400-2485 & 5150-5850 MHz Frequencies

November 20, 2006 Bluffdale, Utah - Pacific Wireless is pleased to announce the release of the latest in the new line of "Roo2" 2nd Generation RooTenna® products, the dual band RooTenna®. The R2T2458 RooTenna® will operate in the 2400 to 2485 MHz frequency with 12dBi of gain and the wideband 5150 to 5850 MHz frequencies with 15dBi of gain. As with all RooTenna® products, a variety of pigtail options are available.

"The dual band antenna gives the system operator the ability to switch his system over to a different frequency to alleviate interference problems without the need to visit a customer's building," said Scott Parsons, Vice President of Business Development for Cushcraft's Pacific Wireless division. "With the proliferation of dual band radio products available on the market we felt that the dual band antenna was the logical choice for many system operators. It also allows the system operator to stock only one product to be used in multiple applications. This reduces the amount of upfront investment and improves cash flow."

The RooTenna® 2 panel antenna offered by Pacific Wireless was developed to allow integration of the customers' radio equipment inside a weatherproof compartment. The newly expanded radio compartment is big enough to house transceivers, amplifiers, and other electronic equipment. The antenna design utilizes a new high efficiency dual band element array with a single SMA connector mounted over a solid 8.5" square backplane for consistent performance. The housing is UV stabilized ABS plastic. The backplate is alodine coated aluminum with stainless steel fasteners. All bracket fasteners are stainless steel for corrosion protection. There are qty (4) 8/32 threaded standoffs provided inside the enclosure for customer mounting. Included with the Roo2 are a customer mounting plate and an RJ45 passthru Ethernet feedthru. The dual band RooTenna® is available in two sizes - deep profile white and low profile white.

*The R2T2458 RooTennas are \$53.81 each in 100 unit quantities.

About Pacific Wireless

Pacific Wireless, a division of Cushcraft Corporation, designs and manufactures state of the art wireless communications solutions targeted at the 900 MHz to 5.8 GHz markets for both fixed and mobile applications.
